

MORE QUESTIONS AND ANSWERS

How does the coffee percolator work?

The Percolator is one of the more familiar methods of brewing coffee in the U.S. It works by sending boiling water upwards, through a tube to the top of a perforated basket, where it rains down over the coffee grounds, and back down into the boiling water to start the process repeatedly.

RELATED QUESTIONS

Are percolators good for coffee?

The truth is, percolators are generally not well-beloved in the specialty coffee community. They're typically considered to be a lower level of coffee brewing because they don't produce coffee with as much balance or clarity as, say, a pour over cone.

How long do you percolate coffee?

Set Your Timer Once your water is bubbling at regular intervals, set a timer for ten minutes at most. You may see some recommendations for six to eight minutes, but it really depends on your personal taste. Remember, the longer your coffee percolates, the stronger it will be.
