

## MORE QUESTIONS AND ANSWERS

---

### **How quickly does an oven lose heat?**

However you probably lose 10-20 degrees and only for maybe 1 minute. If you leave it open for 5 minutes it will lose a lot but remember the coils, rack and walls of the oven are now about 400 degrees too, metal takes a lot longer to cool down than the air around it so it holds temp pretty well.

### **How quickly do ovens lose heat when they are opened?**

It's going to vary with the construction of the oven. More metal => more thermal mass => slower temperature change. I'd say (from measuring oven air temperature during operation) opening the door will cause air temperatures to fall 50–100F in the first few seconds. After the quick air exchange caused by convection currents permitted by an open oven door, closing the door quickly will stop the temperature fall to 50–100F below the original temperature.

### RELATED QUESTIONS

#### **Do ovens take a while to cool down?**

There is no set time it will take for an oven to cool down. Ovens are well insulated to help hold the temperatures. It can take an hour or longer depending on the temperature that was selected. It will also depend if it's gas or electric.

#### **Why is my oven still hot after turning off?**

If the oven continues to heat after it is turned off, the control board is likely defective. If the control board is defective, replace it. ... Sometimes, if the heating element burns out, it can short out to the inside of the oven. If the heating element has shorted out, the oven will not turn off.

#### **How do I cool down my oven?**

If your oven has a fan that activates for a while after it's been turned off you can place a wet towel over the front with the door open, the fan will push the cold air outwards and simultaneously hold the heat inside the oven if it's a tight enough fit.

#### **How long does it take a 350 degree oven to cool down?**

Turn your oven down to 350, wait until the "heating up" light goes on and off one cycle - probably about 15 minutes.

#### **How fast does an oven lose heat?**

However you probably lose 10-20 degrees and only for maybe 1 minute. If you leave it open for 5 minutes it will lose a lot but remember the coils, rack and walls of the oven are now about 400 degrees too, metal takes a lot longer to cool down than the air around it so it holds temp pretty well.
